

PRODUCE EVOLUTION

Be careful, our valves Ref.789 are changing

We currently have 2 different types available (according to DN) with different dimensions

Marking old type:

Marking new Type:

At the end, only the new type will be available (from page 2 to 7)

NEW

ISO 9001: 2008

((

Size: DN 1/4" to 2"

Ends: Male - Female BSP

Min Temperature : - 20°C Max Temperature : + 180°C Max Pressure : 63 Bars

Specifications: Anti blow-out stem

Locking device

Full bore

Materials: Stainless steel ASTM A351 CF8M

SPECIFICATIONS:

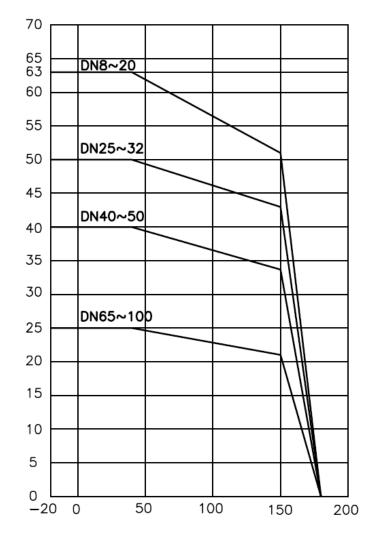

- Full bore
- Anti blow-out stem
- PTFE packing
- Locking device
- Solid ball
- 2 pieces type

USE :

- · Chemical and pharmaceutical industries, petrochemical industries, hydraulic installation, compressed air
- Min and max Temperature Ts: -20°C to + 180°C
- Max Pressure Ps: 63 bars up to DN3/4",50 bars DN 1" to 1"1/4 and 40 bars DN 1"1/2 to 2" (see graph)

PRESSURE / TEMPERATURE GRAPH (STEAM EXCLUDED) :

PRESSURE (Bar)

TEMPERATURE (°C)

RANGE:

- Stainless steel Male / female cylindrical BSP threaded with red flat steel handle DN 1/4" to DN 2"Ref.789
- Butterfly handle Ref. 9831441 to 9831443 from DN 1/4" to DN 1"

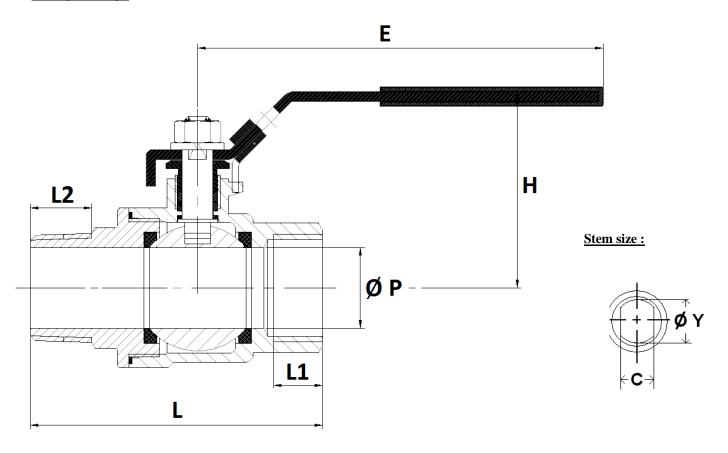

MATERIALS:

Item	Designation	Materials			
1	Body	ASTM A351 CF8M

Torque (Nm)	4	4	6	10	14	20	25	35

STANDARDS:

Fabrication according to ISO 9001 : 2008

 DIRECTIVE 97/23/CE : CE N° 0035 Risk Category II Module D1

- Pressure tests according to ISO 5208, Rate A
- Threaded female BSP cylindrical ends according to ISO 228-1 and male BSP conical according to ISO 7-1 R

ADVICE: Our opinion and our advice are not guaranteed and SFERACO shall not be liable for the consequences of damages. The customer must check the right choice of the products with the real service conditions.

INSTALLATION AND MAINTENANCE

BEFORE INSTALLATION:

Pipe-line must be cleaned and free from residual of weldings,rubbish,shaving and every kind of extraneous materials. Pipe-line must be perfectly aligned and their support properly dimensioned so that there's no external constraint.

Please use the right product according to the services conditions to seal the valve. Use the right bolt tightening so that the ends won't be damaged.

CLEANING AND TESTS

Keep closed the valves during the cleaning operation so that there's no impurities between the ball and the body.

Tests under pressure must be done with a cleaned pipe-line.

Open partially the valve for tests. Pressure test do not exceed the valve specifications according to ISO 5208.

MAINTENANCE

It's recommended to operate the valve twice (open and close) 1 to 2 times per year.

When intervention on the valve, be sure there's no pressure in the pipe-line, there's no fluid in it, and that it is isolated. The temperature must be low enough to operate without risks. If there's a corrosive fluid, inert installation before intervention.

When the valve is under pressure:

If there's a leakage at the packing, tighten it slightly so that the leakage disappears.
